3/11

FOLD COMPLEMENTARY DNA TO "DNA PRIMING REGION" +
SEQUENCE USING STANDARD PCR METHODS:

MATCH UP RESULTING SEQUENCE DATA WITH
RECORDS KEPT THAT CONNECT PROTEIN
IDENTIFY TO SEQUENCE:

ACTGC = PROTEIN # 120
(SPECIES)
104

Fig. 5

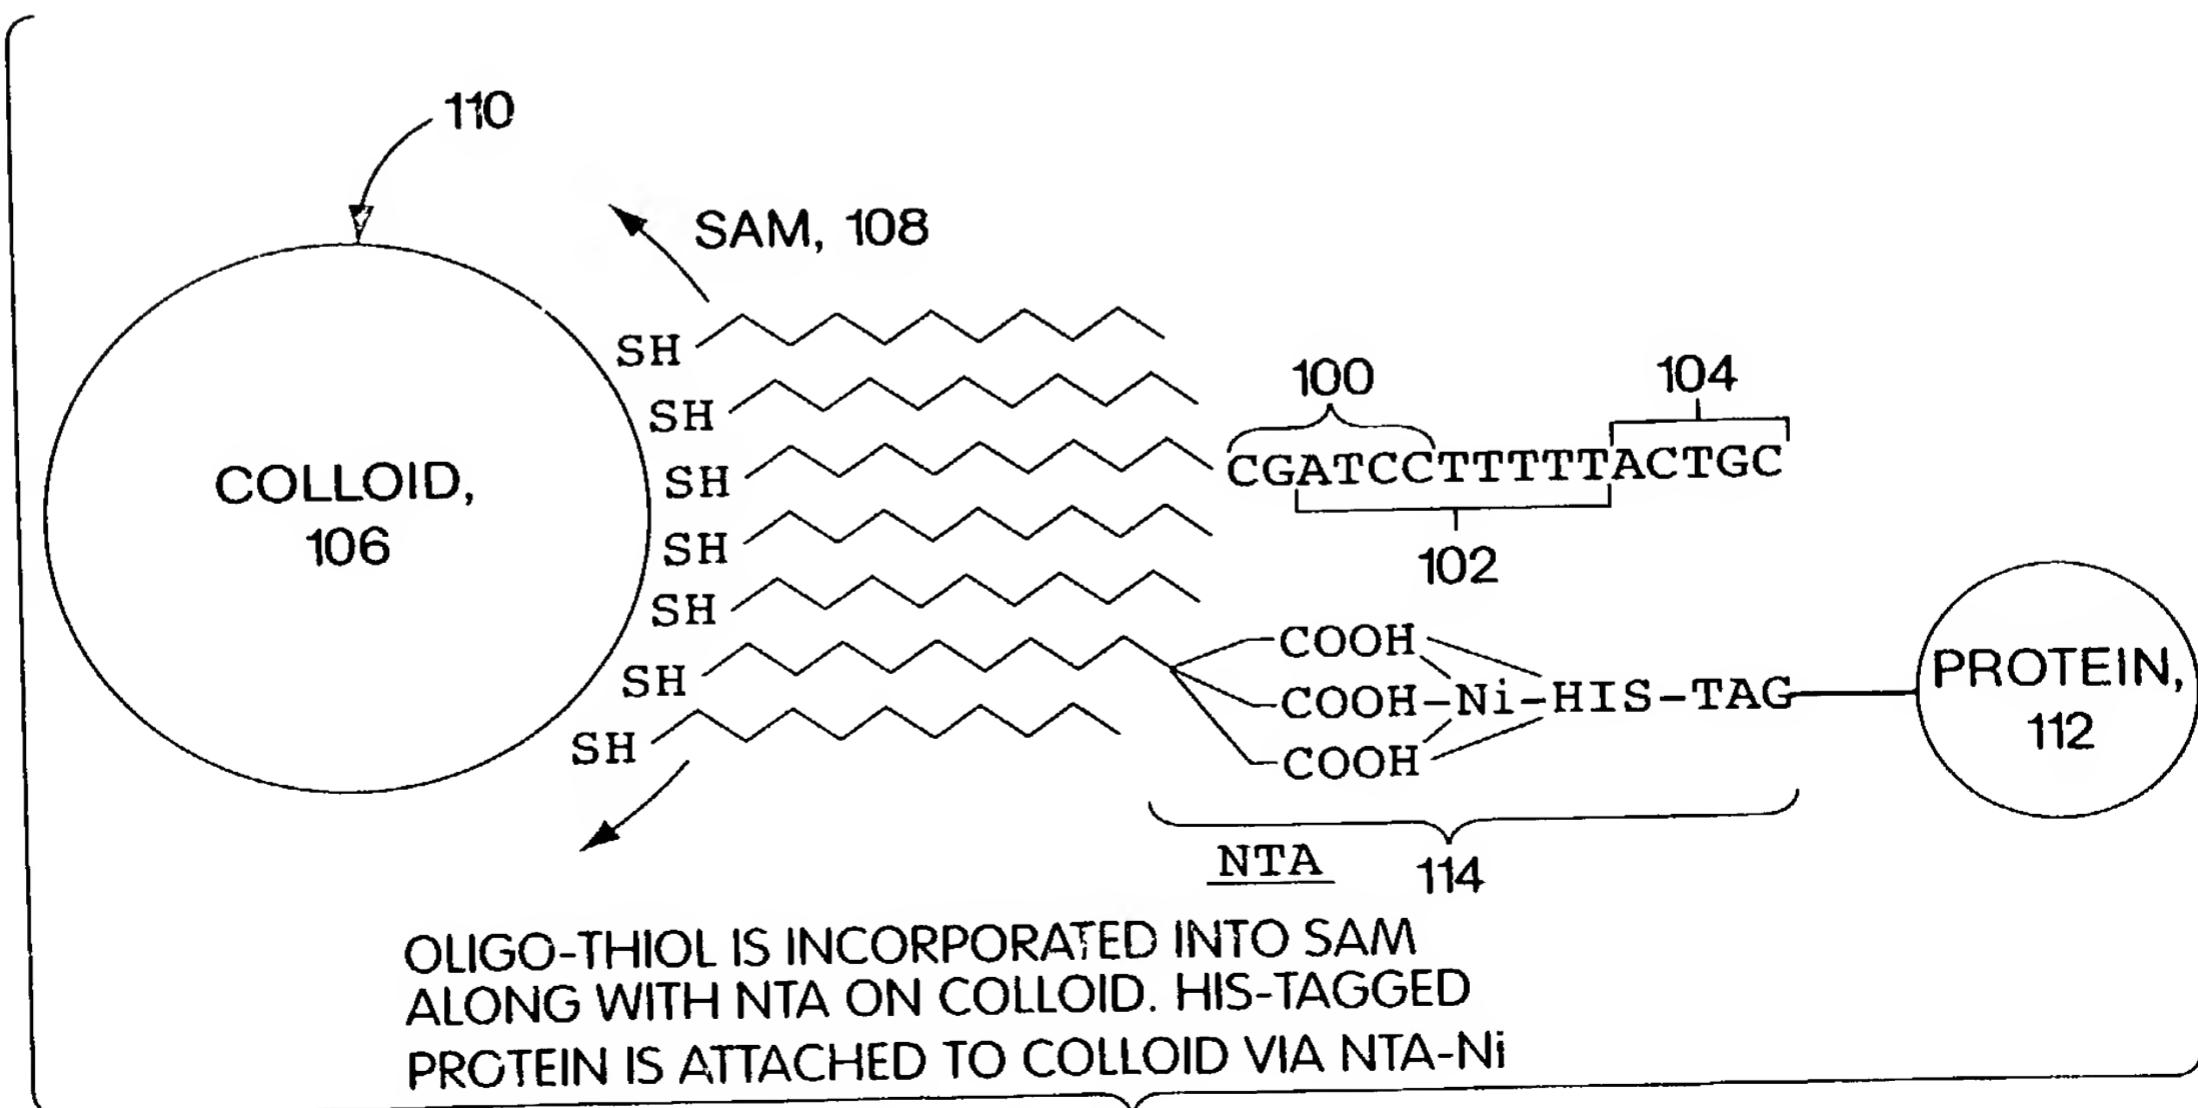

Fig. 6

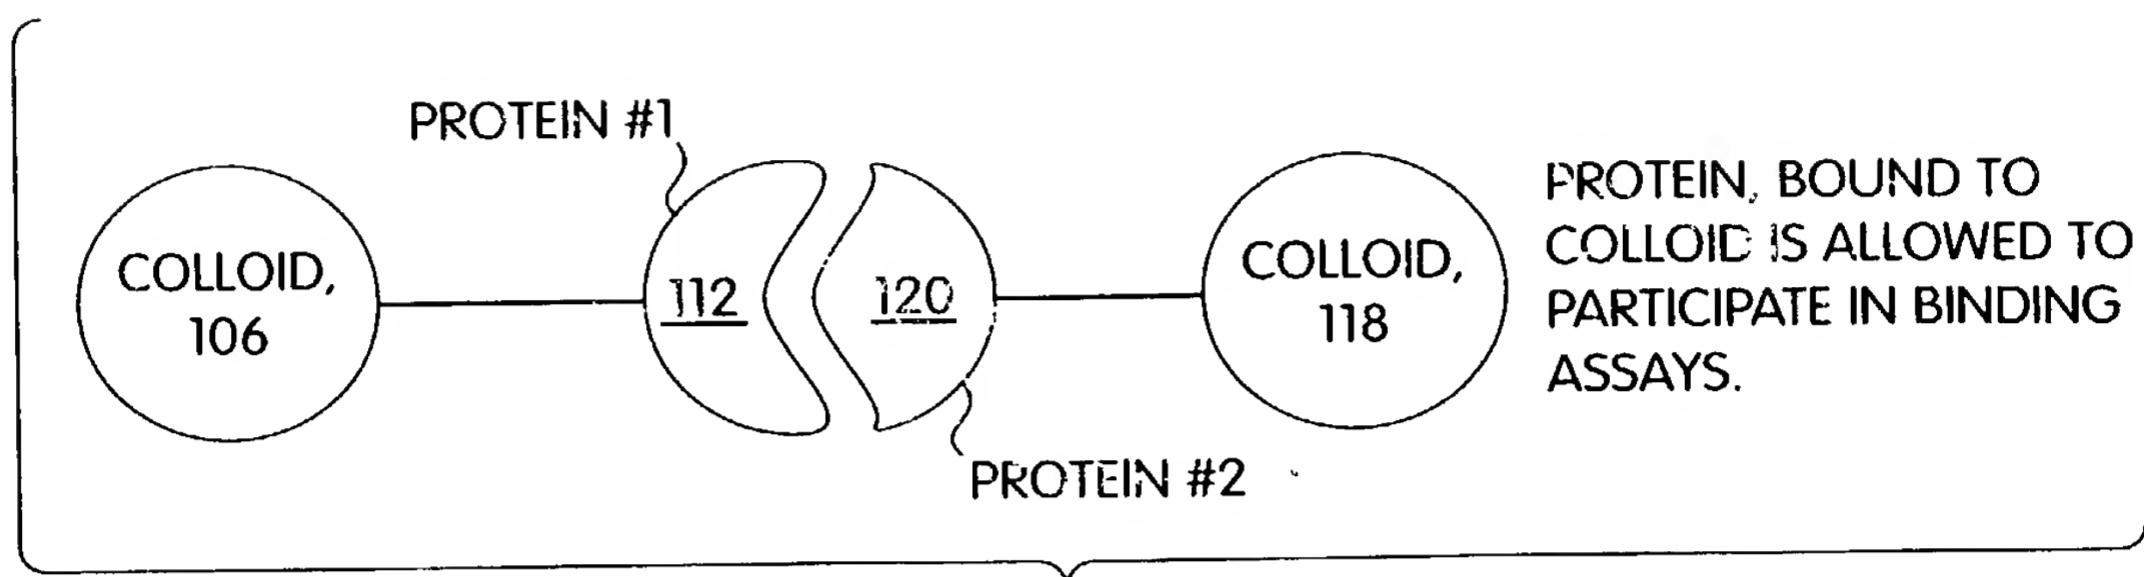

Fig. 7

TO UNCOVER THE IDENTITY OF PROTEIN AFTER THE ASSAYS ARE COMPLETED, CLEAVE THE DNA PORTION OF THE DNA-THIOL BY ADDITION OF A RESTRICTION ENZYME:

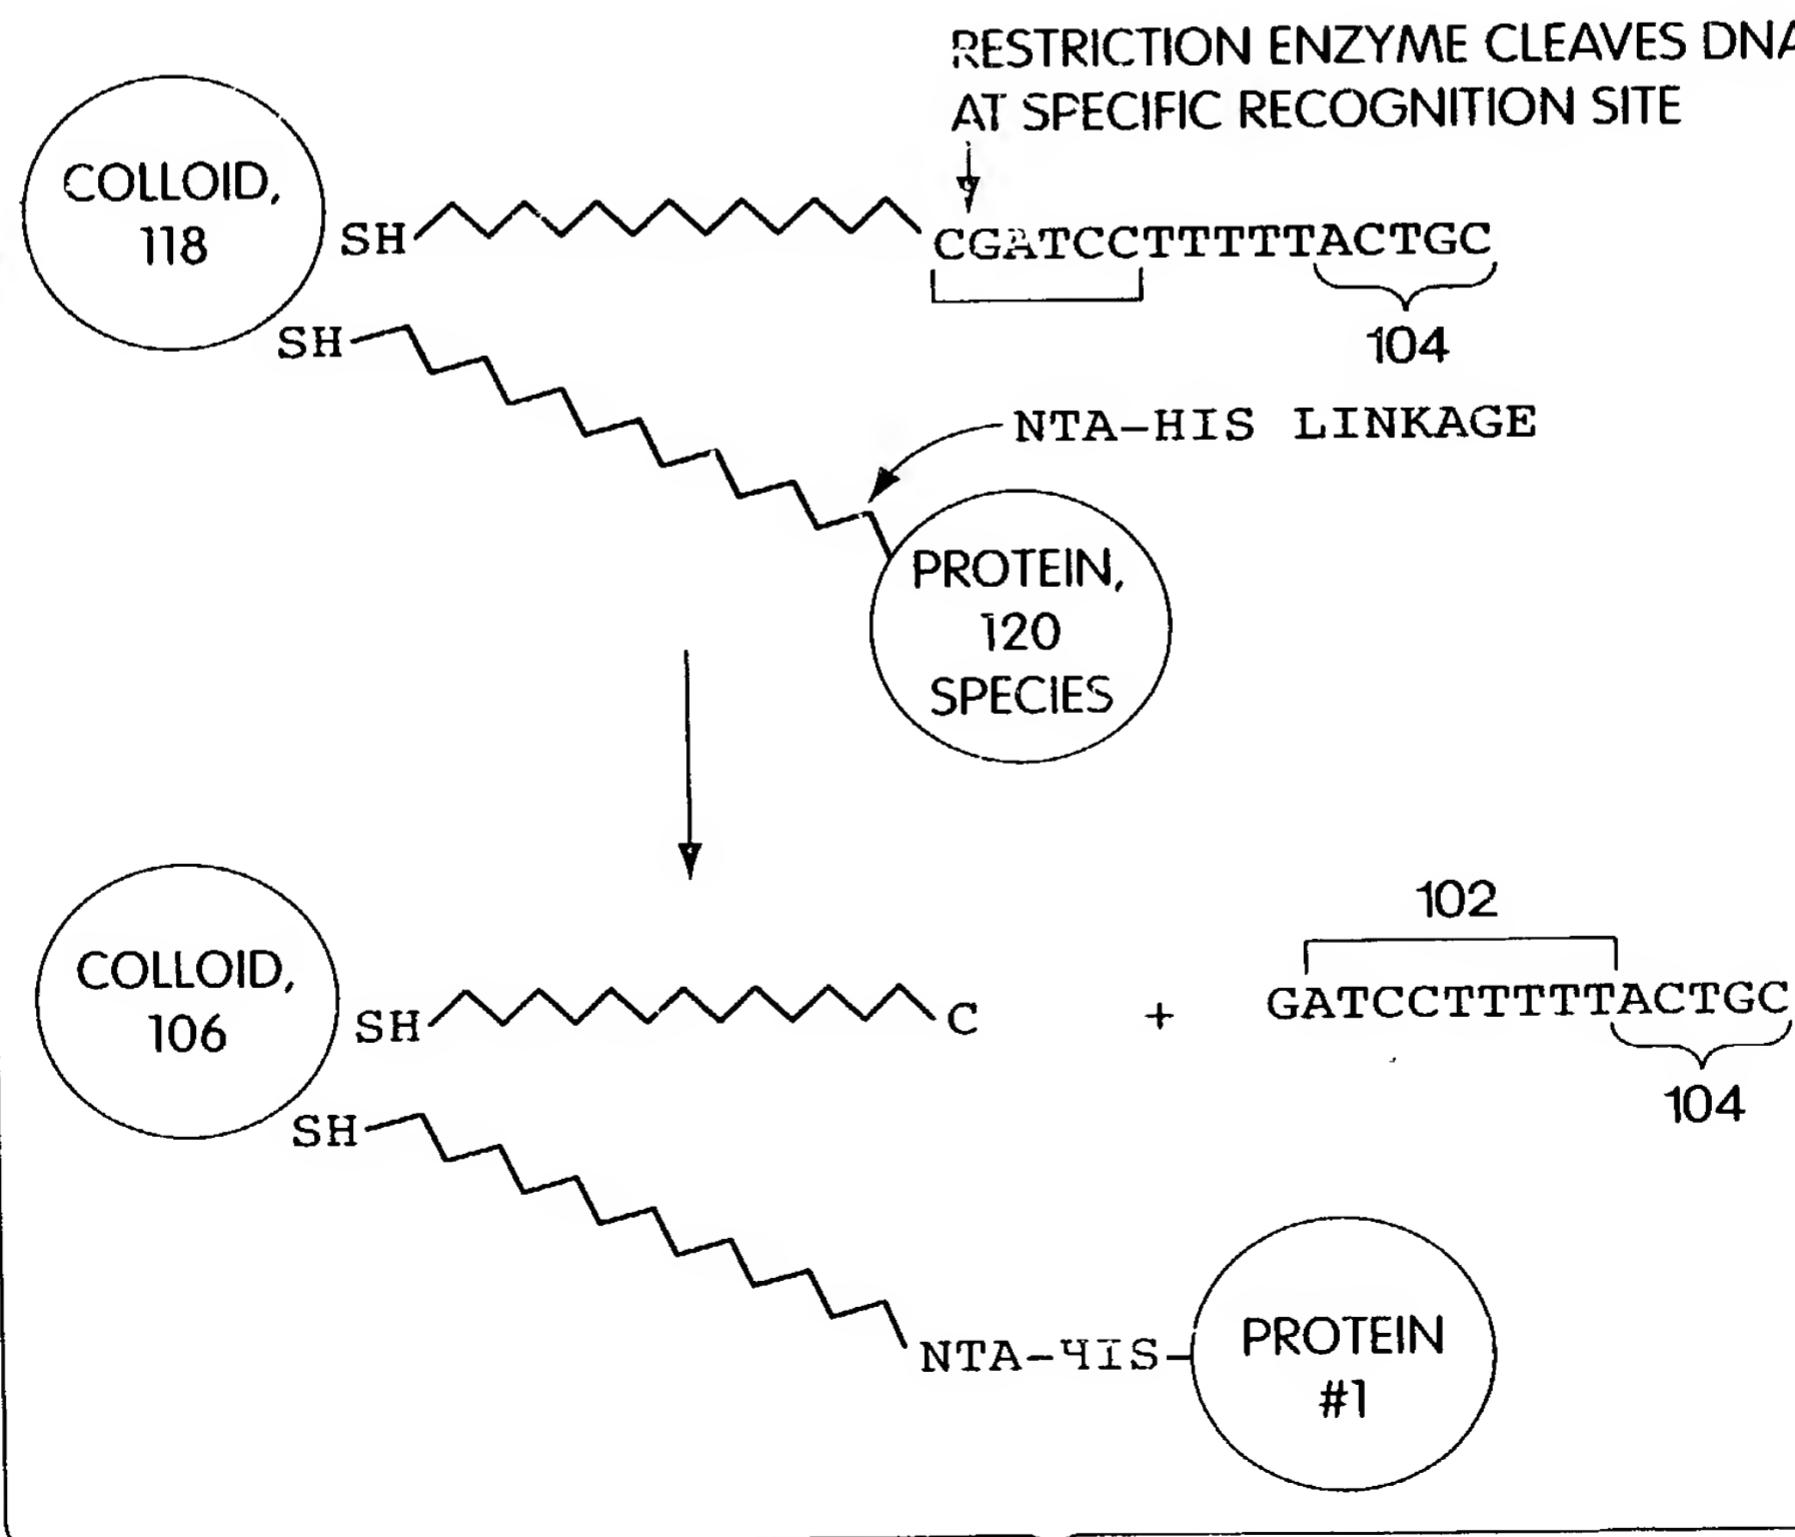

Fig. 8

5/11

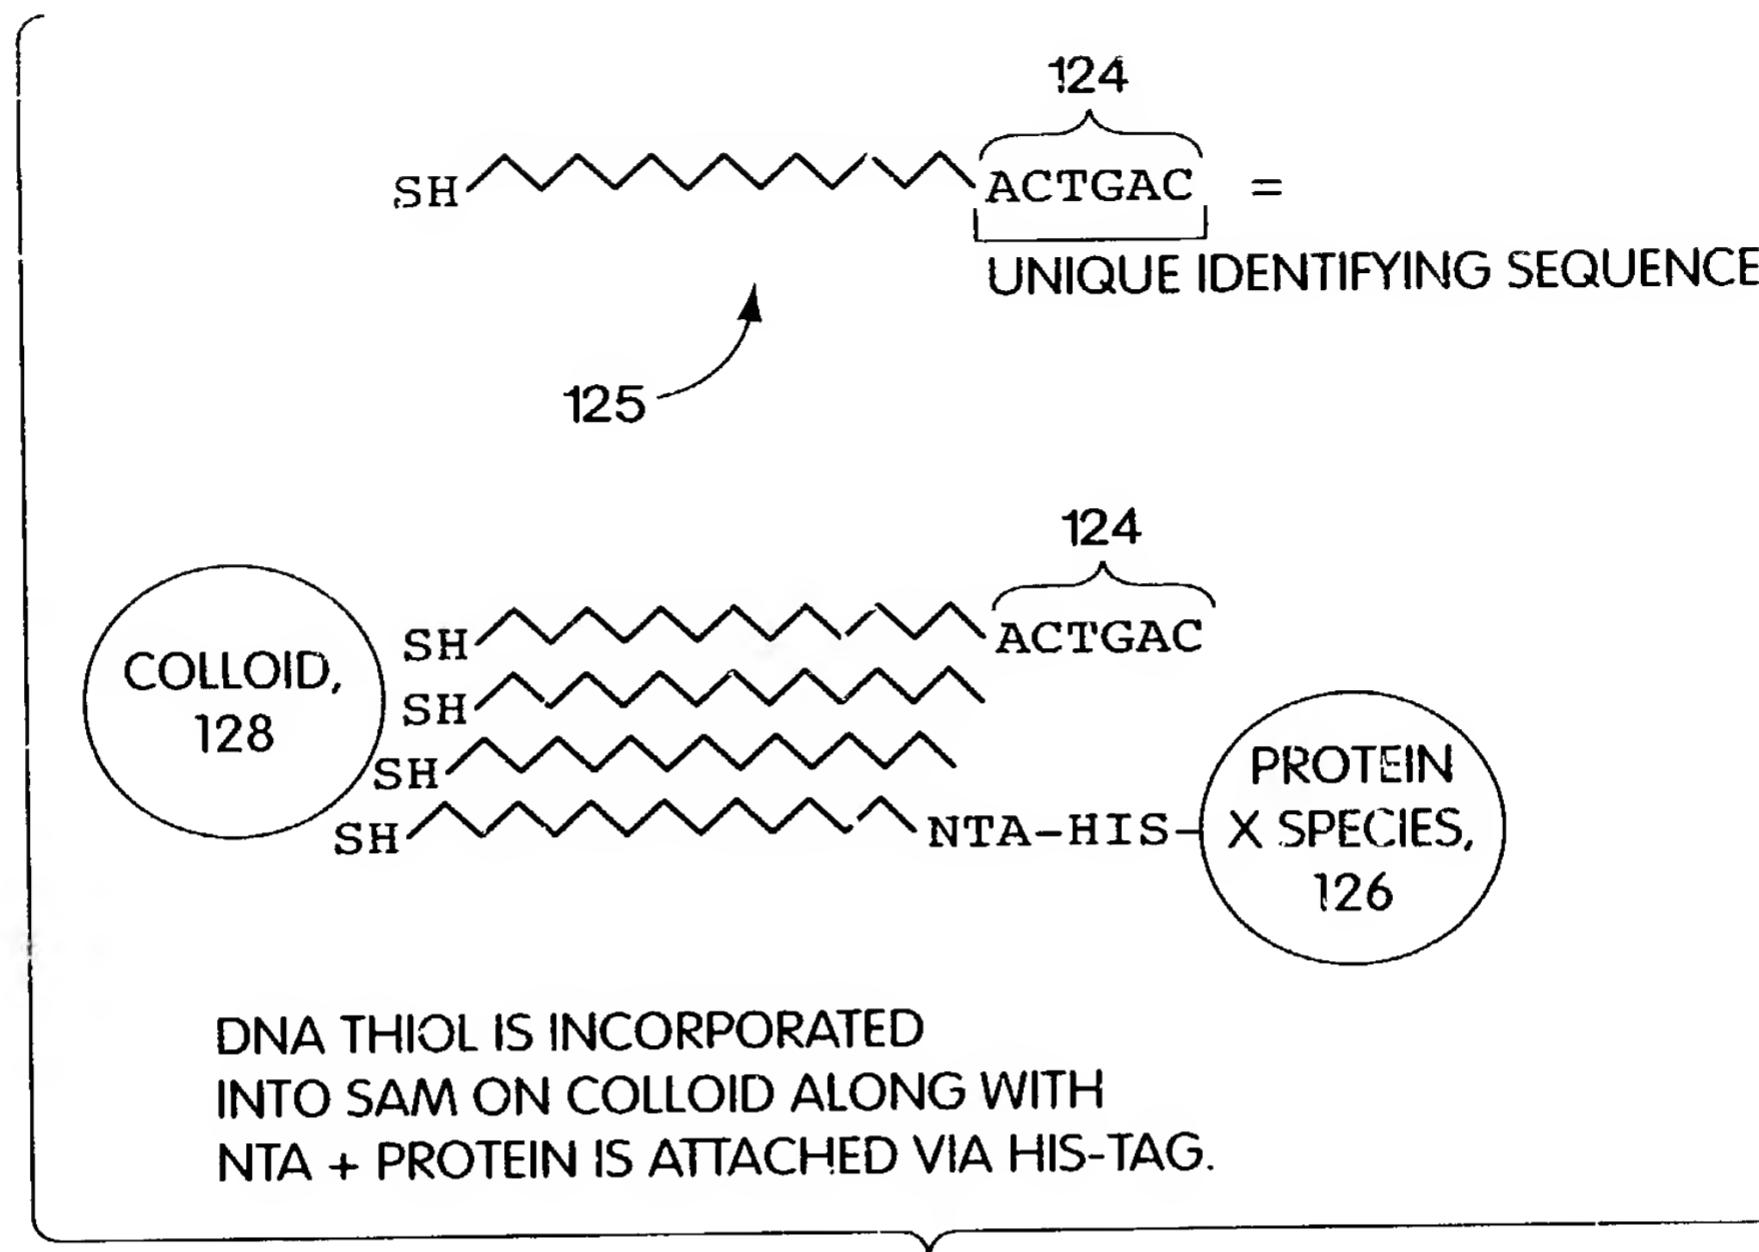

Fig. 9

COLLOIDS BEARING PROTEINS OR SMALL MOLECULES ARE ALLOWED TO INTERACT. BINDING OF PROTEIN X TO SMALL MOLECULE Y BRINGS THEIR DNA TAGS INTO CLOSE PROXIMITY

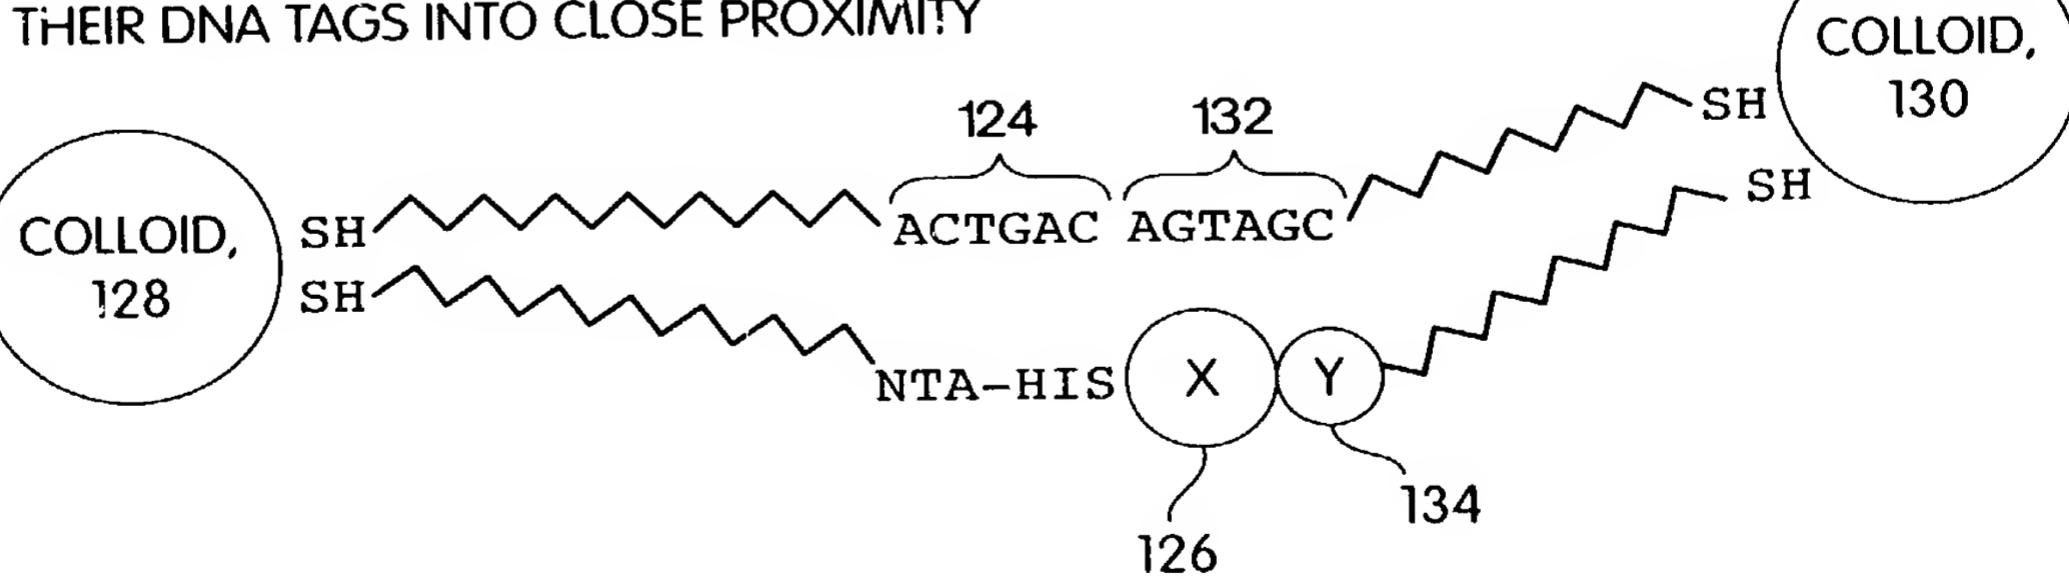

Fig. 10

COMPLEMENTARY SEQUENCES TO OLIGO IDENTIFIER DNA
 ARE ADDED + ALLOWED TO BIND.

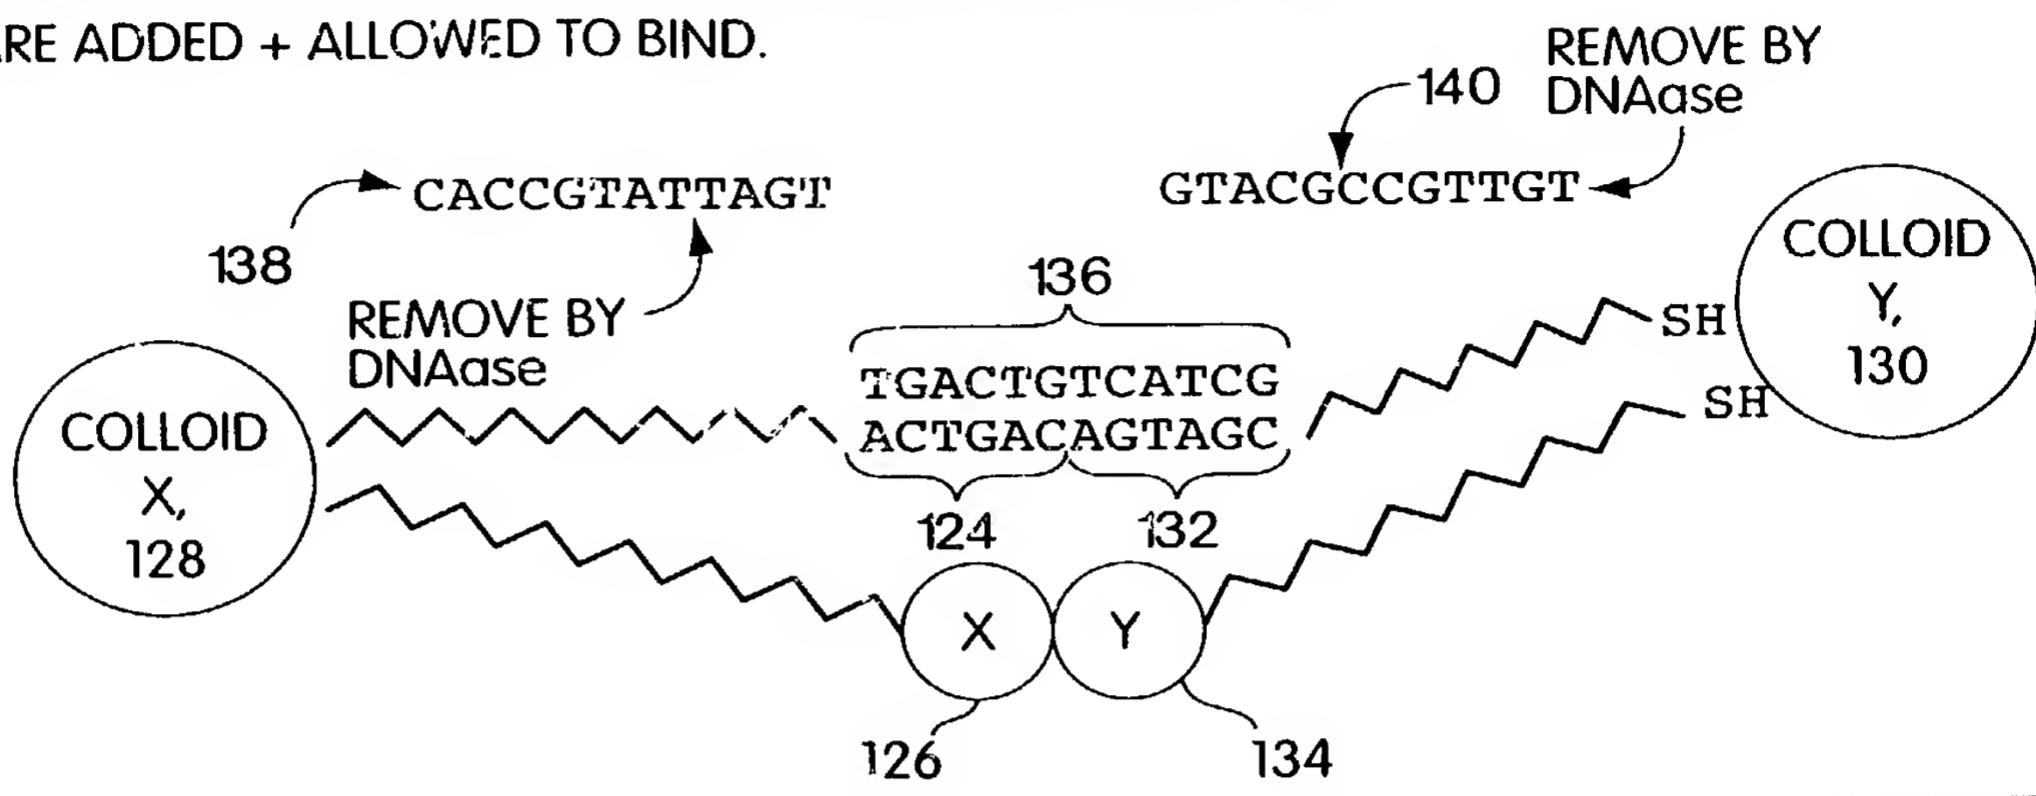

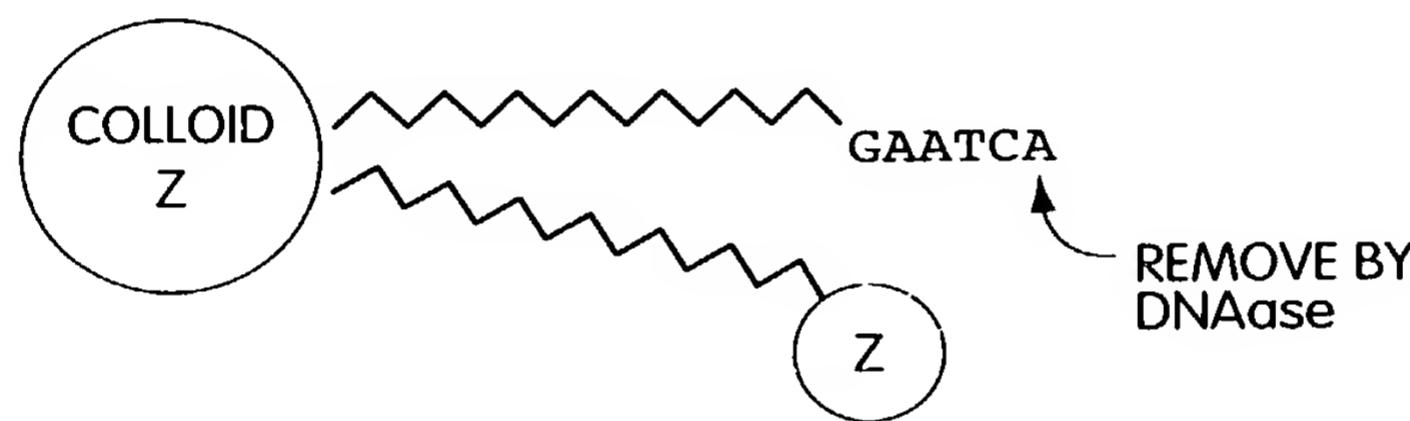

Fig. 11

SINGLE-STRANDED DNase IS ADDED TO REMOVE (OR
 "CHEW UP") ANY NON-HYBRIDIZED DNA.

Fig. 12

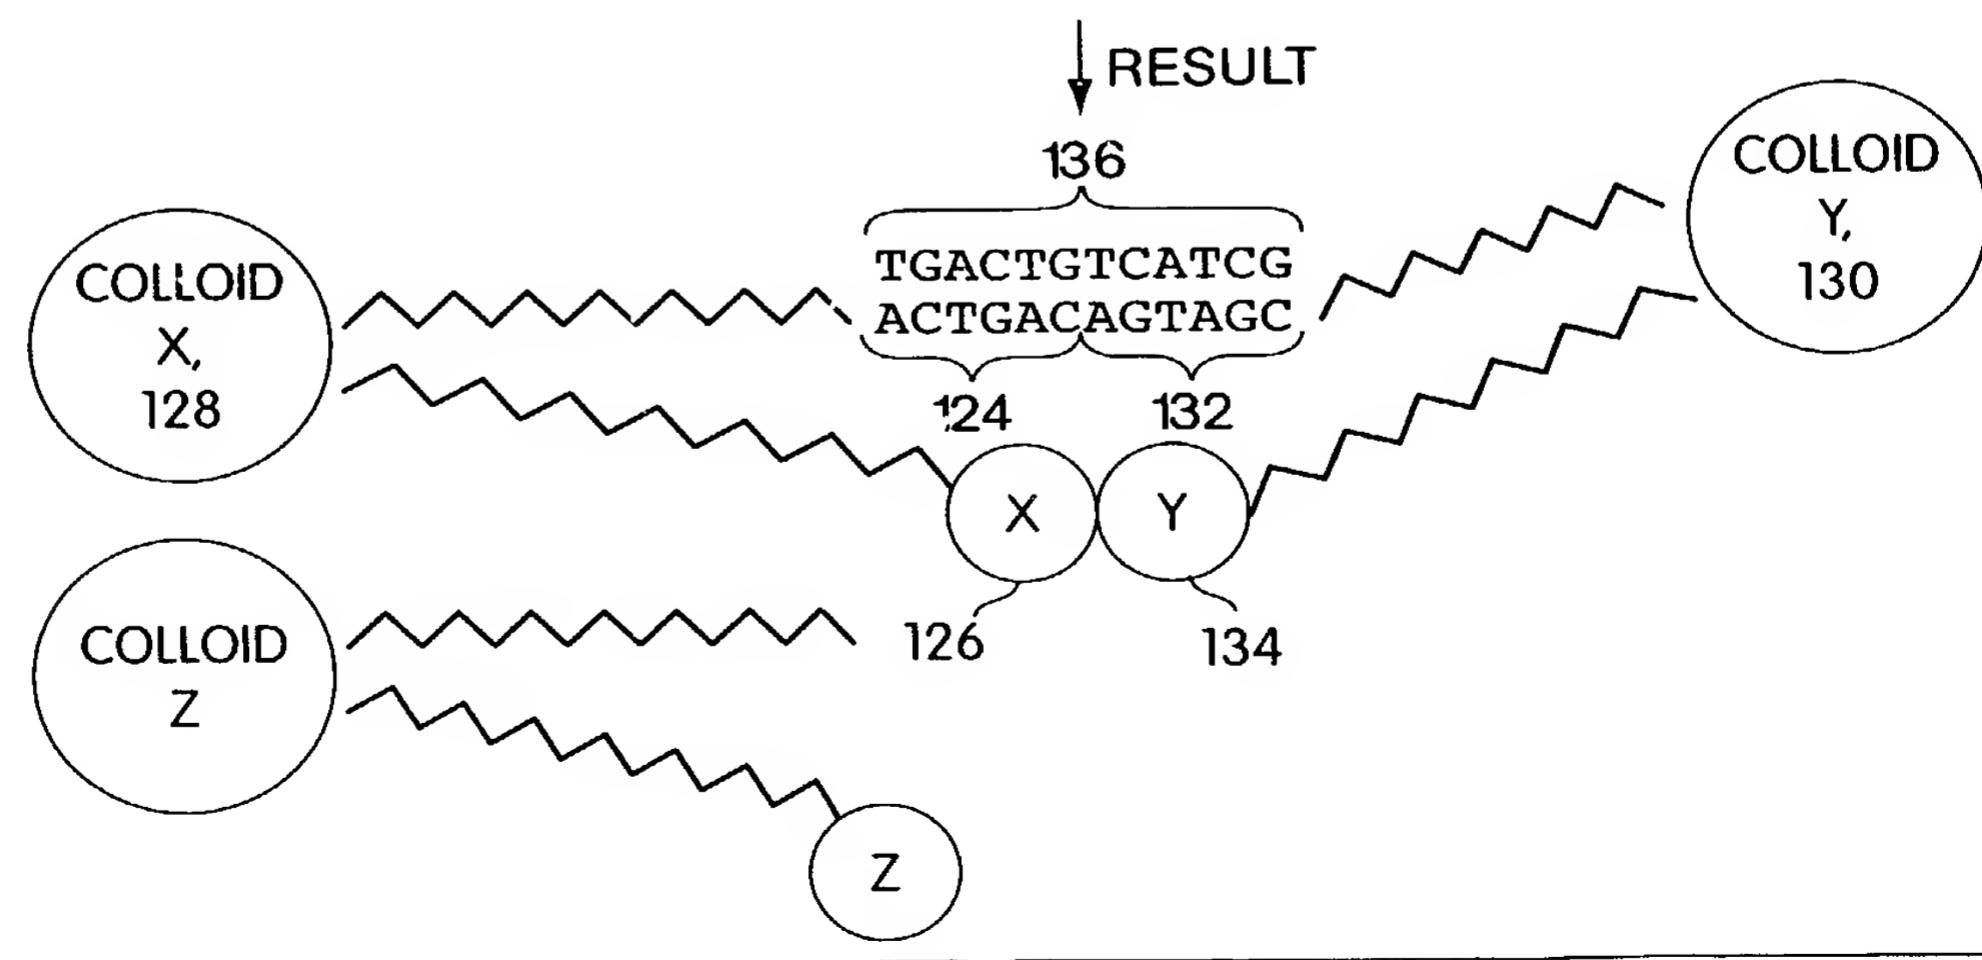

Fig. 13

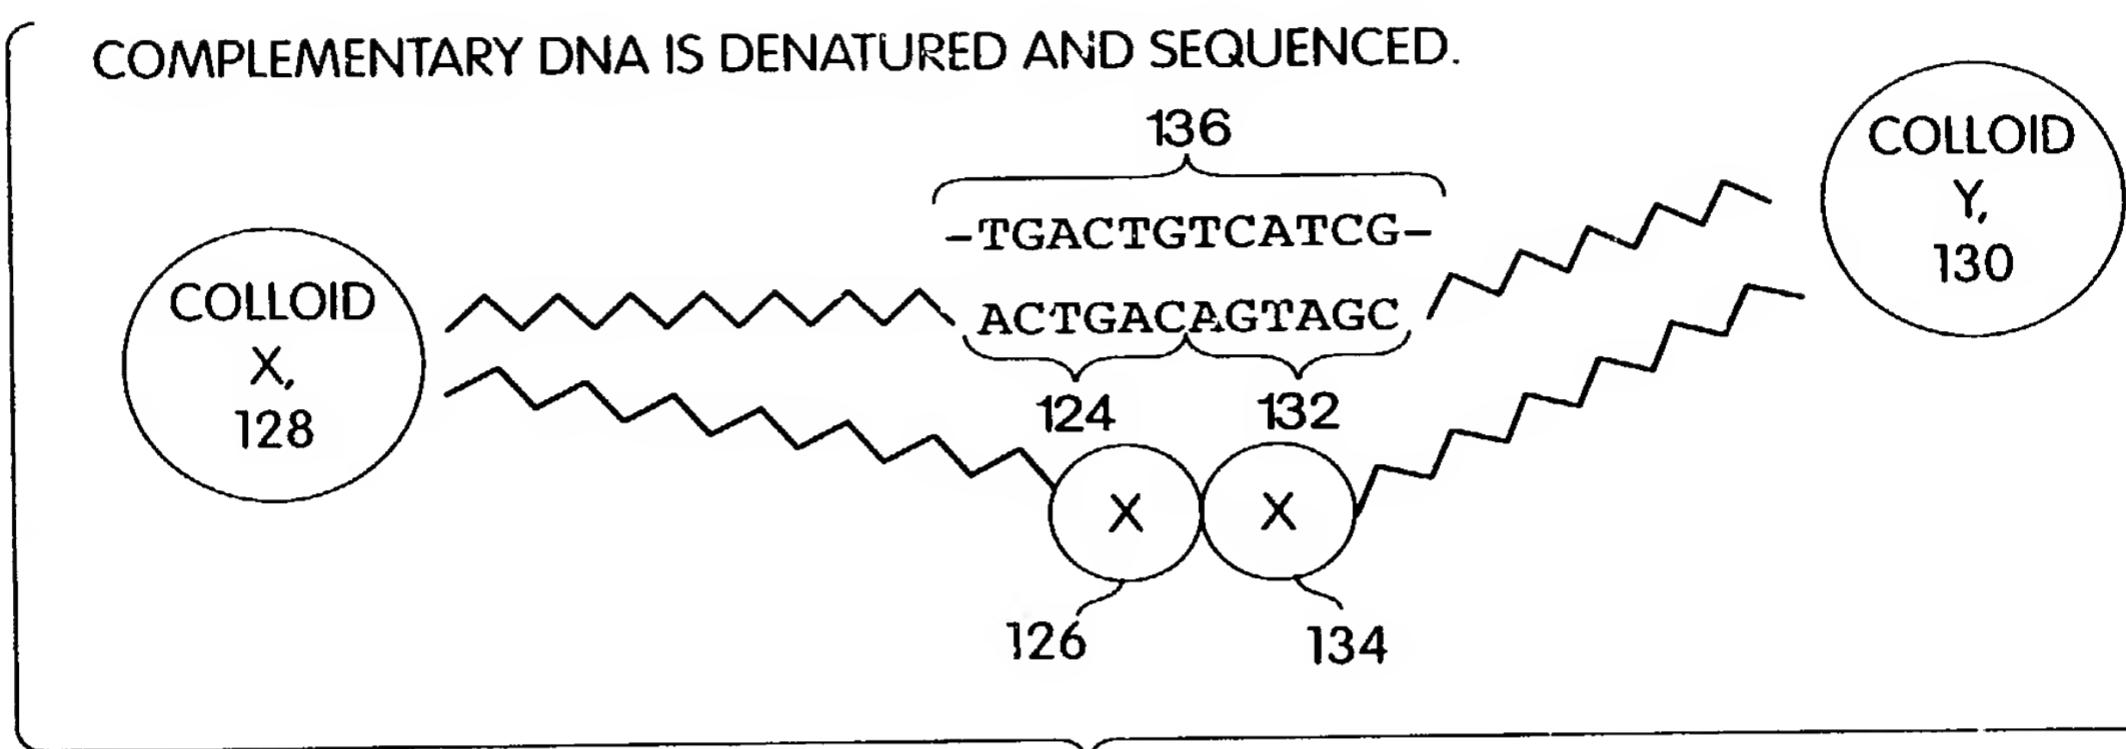

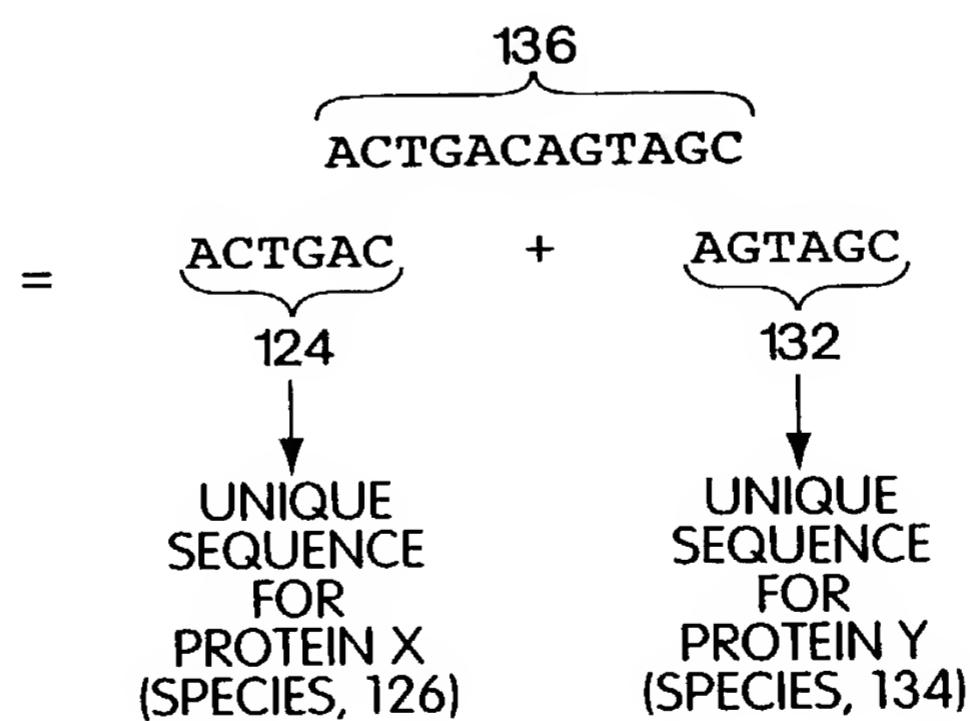

Fig. 14

RESULTING SEQUENCE CONTAINS THE
UNIQUE DNA CODES OF THE TWO BINDING
PARTNERS, X + Y:

PROTEIN X + PROTEIN Y MUST BE BINDING PARTNERS.
